Testsimplets®
Gebrauchsfertige, farbbeschichtete Objektträger
Ready-to-use, prestained slides

Testsimplets ®
* Simple and clean procedure for differential diagnostic microscopy
* Tried and tested method for office practice, laboratory or hospital ward, particularly suitable for single specimens or small series.

Application
* Routine evaluation of the differential blood count
  - differentiation of the normal WBC count and its reactive changes
  - visualization of all normal leucocyte forms and platelets
  - simultaneous detection of reticulocytes
* Cancer cytology
* Urinary cytology
* Cerebrospinal fluid cytology
* Nasal cytology
* Spermatozoal staining

Test principle
* The stain is composed of the two dyes new methylene blue N and cresyl violet acetate in chemically pure form.
  * Constant mixing ration and even distribution ensure reliable good staining quality
  * Reaction principle analogous to that the panchromatic (panptic) stain.
Testsimplets®

Ablauf der Differentialblutbild-Bestimmung

Procedure for differential blood count

einfach simple

Deckglas mit kleinem Blutstropfen auf das Deckglas überbringen lassen

Capillary blood take up a small drop of blood with the cover slip

sauber clean

Venenblut direkt auf das Deckglas auftragen

Venous blood apply directly to the cover slip

schnell fast

Schon nach 15 Minuten auswerten

Ready for evaluation after only 15 minutes
